7 key moments in this video

Tokens are

- More secure (no dictionary attacks)
- Unique per person or per device
- You can have lots of them, different PATs for different roles in different projects

Our Scott Yang wrote this great HOWTO

<https://docs.google.com/document/d/1Sb6tQwUVBhzcmBGWw4UnhGIYcMDdyUy3gaRKcQzYur4/edit>

COGS 108 Final Projects

The COGS 108 Final Project will give you the chance to explore a topic of your choice and to expand your analytical skills. By working with real data of your choosing you can examine questions of particular interest to you.

- You are encouraged to work on a topic that matters to the world (your family, your neighborhood, a state/province, country, etc).
- Taboo Topics: Movie Predictions/Recommendation System; YouTube Data Analysis, Kickstarter success prediction/analysis, prediction of what makes a song popular on Spotify
Whatever is MOST popular EVER and whatever is HOTTEST RN on Kaggle

Final Project: Objectives

- Identify the problems and goals of a *real* situation and dataset.
- Choose an appropriate approach for formalizing and testing the problems and goals, and be able to articulate the reasoning for that selection.
- Implement your analysis choices on the dataset(s).
- Interpret the results of the analyses.
- Contextualize those results within a greater scientific and social context, acknowledging and addressing any potential issues related to privacy and ethics.
- Work effectively to manage a project as part of a team.

Upcoming Project Components

Project Group Signup - 1 submission per group (due Fri Week 2)

Project Review (5%) - Before Mon of week 3, your group will be assigned a previous COGS 108 project to review; A google Form will be released to guide your thinking/discussion about and review of what a previous COGS 108 group did for their project. (due Fri Week 3)

Project Proposal (9%) - a GitHub repo will be created for your group; 'submit' on GitHub (due Fri Week 4)

Project Proposal (9%)

Full project guidelines are here:

Data Structures Review

Structured data

- can be stored in database SQL
- tables with rows and columns
- requires a relational key
- 5-10% of all data

Semi-structured data

- doesn't reside in a relational database
- has organizational properties (easier to analyze)
- CSV, XML, JSON

Unstructured

- non-tabular data
- 80% of the world's data
- images, text, audio, videos

(Semi-)Structured Data

Data that is stored in such a way that it is easy to search and work with. These data are stored in a particular format that adheres to organization principles imposed by the file format. These are the data structures data scientists work with most often.

CSVs

Has the
extension
“.csv”

Each
column
separated
by a
comma

Example CSV - Sheet1 — Notatnik

Plik Edycja Format Widok Pomoc

```
Email,First Name,Last Name,Company,Snippet 1
example1@domain.com,John,Smith,Company 1,Snippet Sentence1
example2@gmail.com,Mary,Blake,Company 2,Snippet Sentence 2
example3@outlook.com,James,Joyce,Company 3,Snippet Sentence 3
```

Each row
is
separated
by a new
line

Jupyter notebooks suck to version control

<https://nextjournal.com/schmudde/how-to-version-control-jupyter>

Clear Output Manually

The simplest solution is to always clear the output before committing. **Cell** → **All Output** → **Clear** → **Save**. This removes any binary blobs that have been generated by the notebook. There are three main drawbacks:

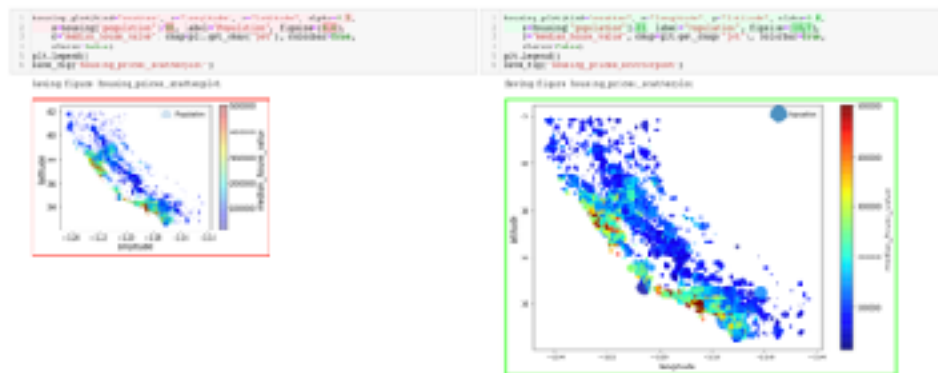

- It is a manual process.
- Collaborators on other machines will need to rerun the notebook to see the output, requiring additional time and setup.

Jupyter notebooks suck to version control

<https://nextjournal.com/schmudde/how-to-version-control-jupyter>

ReviewNB

ReviewNB is a GitHub app that also offers visual diffing with an interface that looks similar to the traditional Jupyter IDE. Because the outputs are visualized, problems associated with committing binary blobs disappear.

ReviewNB example courtesy of the ReviewNB website

Relational Databases: A set of interdependent tables

1. Efficient Data Storage
2. Avoid Ambiguity
3. Increase Data Privacy

A screenshot of a database application window. At the top, there are two tabs: 'Results' and 'Messages'. The 'Results' tab is active, displaying a table with five columns: 'EmployeeId', 'FirstName', 'LastName', and 'DepartmentName'. The table contains 10 rows of data. The first row is highlighted with a dashed border. The data is as follows:

| | EmployeeId | FirstName | LastName | DepartmentName |
|----|------------|-----------|------------|----------------|
| 1 | 1 | Ken | Sanchez | Executive |
| 2 | 2 | Terri | Duffy | Engineering |
| 3 | 3 | Roberto | Tamburello | Engineering |
| 4 | 4 | Rob | Walters | Engineering |
| 5 | 5 | Gail | Erickson | Engineering |

Unstructured Data

Some datasets record information about the state of the world, but in a more heterogeneous way. Perhaps it is a large text corpus with images and links like Wikipedia, or the complicated mix of notes and test results appearing in personal medical records.

Bedroom Or Not?

"The left two photos were correctly predicted as bedrooms; The right two photos were correctly predicted NOT as bedrooms."

Tidy Data

"Good data scientists understand, in a deep way, that the heavy lifting of cleanup and preparation isn't something that gets in the way of solving the problem: it is the problem."

- DJ Patil

Tidy Data

1. Each **variable** you measure should be in a single column

| | A | B | C | D | E | F | G |
|---|------|----------|-----------|--------|-------------|-------|------------|
| 1 | ID | LastName | FirstName | Sex | City | State | Occupation |
| 2 | 1004 | Smith | Jane | female | Frederick | MD | Welder |
| 3 | 4587 | Nayef | Mohammed | male | Upper Darby | PA | Nurse |
| 4 | 1727 | Doe | Janice | female | San Diego | CA | Doctor |
| 5 | 6879 | Jordan | Alex | male | Birmingham | AL | Teacher |

2. Every **observation** of a variable should be in a different row

| | A | B | C | D | E | F | G |
|---|------|----------|-----------|--------|-------------|-------|------------|
| 1 | ID | LastName | FirstName | Sex | City | State | Occupation |
| 2 | 1004 | Smith | Jane | female | Frederick | MD | Welder |
| 3 | 4587 | Nayef | Mohammed | male | Upper Darby | PA | Nurse |
| 4 | 1727 | Doe | Janice | female | San Diego | CA | Doctor |
| 5 | 6879 | Jordan | Alex | male | Birmingham | AL | Teacher |

3. There should be one table for each type of data

Demographic Survey Data

| | A | B | C | D | E | F | G |
|---|------|----------|-----------|--------|-------------|-------|------------|
| 1 | ID | LastName | FirstName | Sex | City | State | Occupation |
| 2 | 1004 | Smith | Jane | female | Frederick | MD | Welder |
| 3 | 4587 | Nayef | Mohammed | male | Upper Darby | PA | Nurse |
| 4 | 1727 | Doe | Janice | female | San Diego | CA | Doctor |
| 5 | 6879 | Jordan | Alex | male | Birmingham | AL | Teacher |

Doctor's Office Measurements Data

| | A | D | E | F | G |
|---|------|---------------|------------|---------|---------|
| 1 | ID | Height_inches | Weight_lbs | Insulin | Glucose |
| 2 | 1004 | 65 | 190 | 0.60 | 163 |
| 3 | 4587 | 75 | 215 | 1.46 | 150 |
| 4 | 1727 | 62 | 124 | 0.72 | 177 |
| 5 | 6879 | 77 | 160 | 1.23 | 205 |

4. If you have multiple tables, they should include a column in each *with the same column label* that allows them to be joined or merged

| | A | B | C | D | E | F | G |
|---|------|----------|-----------|--------|-------------|-------|------------|
| 1 | ID | LastName | FirstName | Sex | City | State | Occupation |
| 2 | 1004 | Smith | Jane | female | Frederick | MD | Welder |
| 3 | 4587 | Nayef | Mohammed | male | Upper Darby | PA | Nurse |
| 4 | 1727 | Doe | Janice | female | San Diego | CA | Doctor |
| 5 | 6879 | Jordan | Alex | male | Birmingham | AL | Teacher |

| | A | D | E | F | G |
|---|------|---------------|------------|---------|---------|
| 1 | ID | Height_inches | Weight_lbs | Insulin | Glucose |
| 2 | 1004 | 65 | 180 | 0.60 | 163 |
| 3 | 4587 | 75 | 215 | 1.46 | 150 |
| 4 | 1727 | 62 | 124 | 0.72 | 177 |
| 5 | 6879 | 77 | 180 | 1.23 | 205 |

Tidy data == rectangular data

A

| | A | B | C | D | E |
|---|-----|--------|---------|---------|---------|
| 1 | Id | sex | glucose | Insulin | triglyc |
| 2 | 101 | Male | 134.1 | 0.60 | 273.4 |
| 3 | 102 | Female | 120.0 | 1.18 | 243.6 |
| 4 | 103 | Male | 124.8 | 1.23 | 297.6 |
| 5 | 104 | Male | 83.1 | 1.16 | 142.4 |
| 6 | 105 | Male | 105.2 | 0.73 | 215.7 |

Tidy Data Benefits

1. consistent data structure
2. foster tool development
3. require only a small set of tools to be learned
4. allow for datasets to be combined

TIDY data is **NOT** the same as **CLEAN** data

A

Data Intuition

1011

1375

In today's pattern recognition class my professor talked about PCA, eigenvectors and eigenvalues.

I understood the mathematics of it. If I'm asked to find eigenvalues etc. I'll do it correctly like a machine. But I didn't **understand** it. I didn't get the purpose of it. I didn't get the feel of it.

I strongly believe in the following quote:

You do not really understand something unless you can explain it to your grandmother. -- Albert Einstein

Well, I can't explain these concepts to a layman or grandma.

1. Why PCA, eigenvectors & eigenvalues? What was the *need* for these concepts?
2. How would you explain these to a layman?

Theory vs. Practice: “Tai’s model”

Figure 1—Total area under the curve is the sum of individual areas of triangles a, c, e, and g and rectangles b, d, f, and h.

Fermi Estimation

<https://forms.gle/C982naWtU9RvHqAb7>

Approximately how many piano tuners do you think there are in the city of Chicago?

**Has humanity produced enough
paint to cover the entire land area of
the Earth?**

—Josh (Bolton, MA)

Fermi Estimation

Has humanity produced enough paint to cover the entire land area of the Earth?

This answer is pretty straightforward. We can look up the size of the world's paint industry, extrapolate backward to figure out the total amount of paint produced. We'd also need to make some assumptions about how we're painting the ground. Note: When we get to the Sahara desert, I recommend not using a brush.

But first, let's think about different ways we might come up with a guess for what the answer will be. In this kind of thinking—often called Fermi estimation—all that matters is getting in the right ballpark; that is, the answer should have about the right number of digits. In Fermi estimation, you can round ^[1] all your answers to the nearest order of magnitude:

Let's suppose that, on average, everyone in the world is responsible for the existence of two rooms, and they're both painted. My living room has about 50 square meters of paintable area, and two of those would be 100 square meters. 7.15 billion people times 100 square meters per person is a little under a trillion square meters—an area smaller than Egypt.

| NOT ENOUGH | EXACTLY ENOUGH | MORE THAN ENOUGH |
|---------------|-------------------|---------------------|
| / | | |

Let's make a wild guess that, on average, one person out of every thousand spends their working life painting things. If I assume it would take me three hours to paint the room I'm in, ^[2] and 100 billion people have ever lived, and each of them spent 30 years painting things for 8 hours a day, we come up with 150 trillion square meters ... just about exactly the land area of the Earth.

| NOT ENOUGH | EXACTLY ENOUGH | MORE THAN ENOUGH |
|---------------|-------------------|---------------------|
| / | / | |

How much paint does it take to paint a house? I'm not enough of an adult to have any idea, so let's take another Fermi guess.

Based on my impressions from walking down the aisles, home improvement stores stock about as many light bulbs as cans of paint. A normal house might have about 20 light bulbs, so let's assume a house needs about 20 gallons of paint. ^[3] Sure, that sounds about right.

The average US home costs about \$200,000. Assuming each gallon of paint covers about 300 square feet, that's a square meter of paint per \$300 of real estate. I vaguely remember that the world's real estate has a combined value of something like \$100 trillion,^[4] which suggests there's about 300 billion square meters of paint on the world's real estate. That's about one New Mexico.

| NOT ENOUGH | EXACTLY ENOUGH | MORE THAN ENOUGH |
|---------------|-------------------|---------------------|
| // | | |

Of course, both of the building-related guesses could be overestimates (lots of buildings are not painted) or underestimates (lots of things that are not buildings ^[5] are painted) But from these wild Fermi estimates, my guess would be that there probably isn't enough paint to cover all the land.

So, how did Fermi do?

According to the report [The State of the Global Coatings Industry](#), the world produced 34 billion liters of paints and coatings in 2012.

There's a neat trick that can help us here. If some quantity—say, the world economy—has been growing for a while at an annual rate of n —say, 3% (0.03)—then the most recent year's share of the whole total so far is $1 - \frac{1}{1+n}$, and the whole total so far is the most recent year's amount times $1 + \frac{1}{n}$.

If we assume paint production has, in recent decades, followed the economy and grown at about 3% per year, that means the total amount of paint produced equals the current yearly production times 34.^[6] That comes out to a little over a trillion liters of paint. At 30 square meters per gallon,^[2] that's enough to cover 9 trillion square meters—about the area of the United States.

So the answer is no; there's not enough paint to cover the Earth's land, and—at this rate—probably won't be enough until the year 2100.

Data Intuition

1. Think about your question and your expectations
2. Do some Fermi calculations (back of the envelope calculations)
3. Write code & look at outputs <- think about those outputs
4. Use your gut instinct / background knowledge to guide you
5. Review code & fix bugs

On your own (meaning w/o Googling), please fill out quickly:

Vox Populi

The Wisdom of the Crowds

- Diversity of opinion: Each person should have private information....even if it's just an eccentric interpretation of the known facts
- Independence: People's opinions aren't determined by the opinions of those around them
- Decentralization: People are able to specialize and draw on local knowledge
- Aggregation: Some mechanism exists for turning private judgements into a collective decision
